SUMMARY

Full stack GenAI developer with 2.5+ years building web applications on the **MERN stack** (MongoDB, Express.js, React.js, Node.js) with **REST APIs**, and production **GenAI** features: **LangGraph** agents, structured LLM outputs, **RAG**, voice AI and PII-safe pipelines. At EXL Service I build React, Node.js and FastAPI features, LLM workflows and Twilio/Exotel phone integrations for an AI voice interviewer. Built and deployed three full stack AI applications with live demos, tests and CI, including a MERN multi-agent support platform.

TECHNICAL SKILLS

MERN stack: MongoDB (Mongoose), **Express.js**, **React.js**, **Node.js**

Backend & APIs: REST APIs, JWT auth and role-based access control, Zod and Pydantic validation, Python, FastAPI, Django REST Framework, WebSockets

Frontend & data: TypeScript, JavaScript, Tailwind CSS, TanStack Query, PostgreSQL, MySQL

GenAI & agents: LangGraph (Python and JS), LangChain, **LLM APIs** (Gemini, Sarvam-105B), structured outputs, prompt engineering, multi-agent orchestration, human-in-the-loop

RAG, voice & evals: RAG, vector search (FAISS), speech-to-text/text-to-speech, **Twilio** and **Exotel** telephony, OCR, Microsoft Presidio PII masking, labelled eval sets

Testing & DevOps: Vitest, Supertest, pytest, Docker, GitHub Actions CI/CD, AWS (EC2, S3), Render, Vercel, GCP

EXPERIENCE

Reporting Analyst — GenAI Engineering · EXL Service, Noida — Apr 2026 – Present

Stack: React.js, Node.js, Express.js, Python, FastAPI, REST APIs, LangGraph, Gemini, Twilio, Exotel, WebSockets, Microsoft Presidio, Docker

- Building an AI voice interviewer and candidate-screening platform that calls candidates, runs a live AI interview, and returns structured results to recruiters.
- Designed the interview flow as a **LangGraph** state machine: the **LLM** returns schema-validated JSON, and code enforces fairness rules, consent gating and routing.
- Built full stack features across a **React.js** frontend, **Node.js**/**Express.js** services and **FastAPI REST APIs** for candidate profiles, JD rubrics and workflow status, with typed contracts and database queries.
- Integrated **Twilio** and **Exotel** telephony behind one interface: outbound interview calls to candidates, call-status webhooks with retries, and live call-audio streaming over **WebSockets** into the speech-to-text/text-to-speech pipeline.
- Built PII masking on **Microsoft Presidio** with custom recognisers for Indian identifiers (PAN, Aadhaar, profile URLs).
- Designed an auditable storage layer (append-only event log, answers, evaluation records) and rubric-based scoring modules exposed through the API.

Full Stack Developer — MERN (Contract) · Regardo Vision and Sources Pvt. Ltd., New Delhi (Remote) — Apr 2024 – Mar 2026

Stack: MongoDB, Express.js, React.js, Node.js, REST APIs, SQL, Python (Django REST Framework, FastAPI), TensorFlow, Docker, AWS

- Built and deployed a full stack workflow-automation platform with a **React.js** frontend and a **REST API** backend, cutting manual processing by about 40%.
- Built **REST APIs** with **Node.js** and **Express.js** backed by **MongoDB** for client applications, and integrated third-party services.
- Built **React.js** dashboards and admin panels for real-time monitoring of client operations.
- Implemented **JWT** authentication and role-based access control; optimised SQL queries and added caching, improving API response times by about 35%.
- Integrated ML services (TensorFlow, Flask) into web workflows; containerised with Docker, CI/CD on GitHub Actions, deployed on AWS EC2 and S3.

PROJECTS

Support Escalation Mesh — MERN + Multi-Agent AI · MongoDB · Express.js · React.js · Node.js · LangGraph.js
Live demo · GitHub

- **Express.js REST API** (JWT, role-based access, Zod validation, rate limiting) with **MongoDB**/Mongoose, and a **React.js** + TypeScript console where agents approve, edit or take over AI-drafted replies.
- **LangGraph.js** multi-agent routing with refund limits and escalations enforced in code, plus an automatic rule-based fallback when the **LLM** API fails.
- 30-ticket eval set (English, Hinglish, Hindi): 100% routing accuracy, 100% escalation recall, zero policy violations; 75 automated tests, CI, deployed on Render, Vercel and MongoDB Atlas.

Kaagaz — Hindi/English Document AI · Live demo · GitHub React.js · TypeScript · FastAPI · PostgreSQL · RAG

- **React.js** + TypeScript app (TanStack Query, Hindi/English UI) on a FastAPI **REST API** with JWT auth, ownership checks, rate limits and a Postgres `SKIP LOCKED` job queue.
- OCR → **Presidio** PII masking (Verhoeff-checked Aadhaar, PAN, phone) → **LLM** field extraction → cross-lingual **RAG** answers with page citations validated in code.
- 125+ automated tests on real Postgres, CI on GitHub Actions; deployed on Render, Vercel and Neon.

Bolo — Hinglish Voice AI Booking Agent · Live demo · React.js · TypeScript · FastAPI · PostgreSQL · LangGraph
GitHub

- Multi-tenant clinic app: **React.js** staff dashboard (calendar, call log, schedules) and patient widget on a **REST API** with JWT and per-clinic isolation.
- **LangGraph** conversation state machine over a speech-to-text/text-to-speech loop; the **LLM** only extracts fields, and code enforces slot rules and explicit confirmation.
- Postgres partial unique index prevents double booking under concurrent calls; 57 tests including 16 scripted Hinglish/Hindi conversations; deployed on Render, Vercel and Neon.

EDUCATION

B.Tech, Information Technology · Lovely Professional University, Punjab · CGPA 7.16 2019 – 2023

CERTIFICATIONS

- LLM Engineering: Master AI & Large Language Models
- Machine Learning & AI Foundations
- US Healthcare / HIPAA Compliance Training
